

Indiana State Department of Health

WEEKLY INFLUENZA REPORT

Data as of Wednesday, December 8, 2010

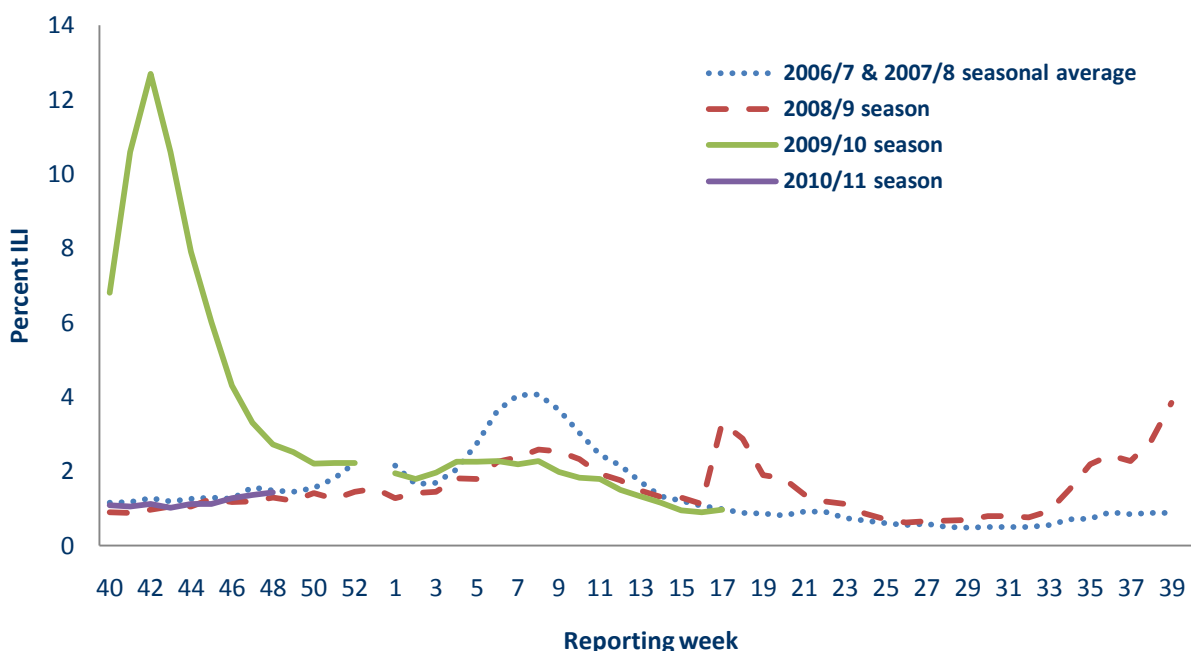

The following report is meant to provide local health departments, hospital administrators, health professionals and residents with a general understanding of the burden of influenza-like illness (ILI). Data from several surveillance programs were utilized to produce this report. Currently, all influenza viruses circulating are not a, “novel” or new virus to humans. Should any changes occur, then enhanced surveillance methods will be implemented and incorporated into this report.

For further information about the data presented in this report, please call the ISDH Surveillance and Investigation Division at 317-233-7125.

Key Points:

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.37%) .
- The percentage of ILI reported by the influenza sentinel surveillance system (.73%) is below baseline.
- Data for week 48 was collected from November 28- December 4, 2010
- During week 48, 0% (0/12) of specimens were positive for influenza.
- During week 48, 0 Indiana schools (K-12) reported that their absenteeism rate was 20% or higher.
- During week 47, there were zero confirmed influenza associated deaths

Percent of patients who presented at an emergency department (ED) with a chief complaint relating to influenza-like illness – Indiana, 20010/11 & 2009/10, 2008/9 seasons, 2006/7 & 2007/8 seasonal averages.*† (EDs currently reporting = 91) Health District-level data is available at the end of this report.

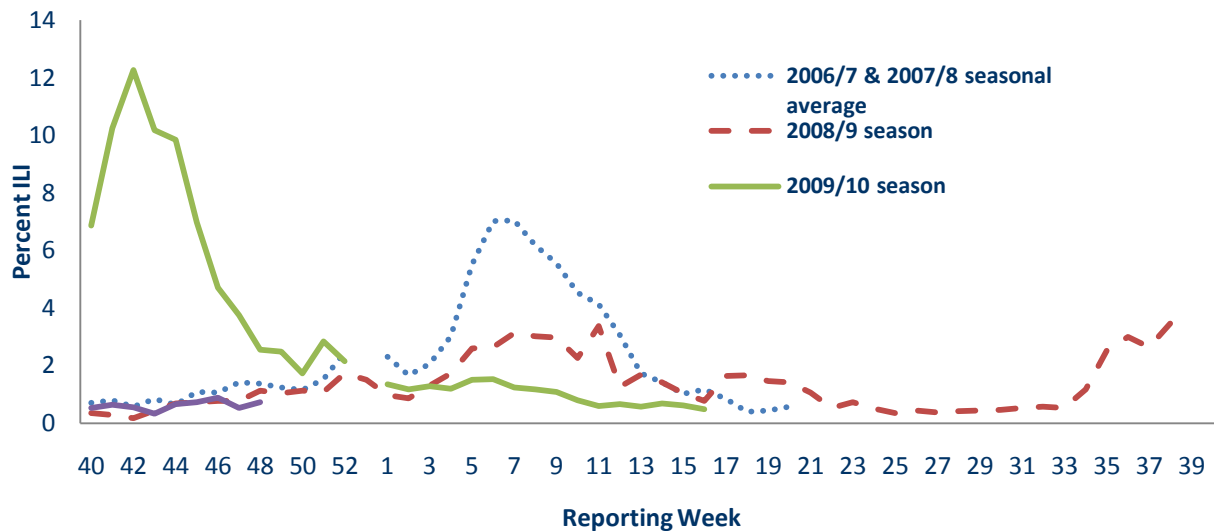

*Data obtained from the ISDH Public Health Emergency Surveillance System (PHESS). The 2008/9 season had a “Week 53” which the 2006/7 and 2007/8 seasons did not have, explaining the break in the seasonal average line.

† PHESS data is very timely, so the data reported is for the most current week.

Key Findings

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.42) which is at baseline.

Percent of patients who presented at sentinel provider clinics with symptoms relating to influenza-like illness – Indiana, 2010/2011 data vs. 2009/2010, 2008/09, 2006/7 and 2007/8 influenza seasonal averages.*† (Number of sentinel provider clinics who reported this week = 22)

*Data obtained from the ISDH Sentinel Influenza Surveillance System. No data is available for weeks 21-39 during the 2006/7 and 2007/8 seasons due to decreased reporting during traditionally non-influenza months.

† Sentinel data has limited timeliness, so the data reported is for the week before the most current week. This data is subject to change as sentinel sites can back-date their weekly reports.

Sentinel reported influenza-like illness (ILI) by sentinel type and reporting week – Indiana, 2010/11 season.*

Reporting Week	All Reporters %ILI (# of reporters)	Universities %ILI (# of reporters)	Non-Universities %ILI (# of reporters)
Week 48	.73 (22)	.60 (7)	.78 (15)
Week 47	.52 (28)	.55 (6)	.55 (22)
Week 46	.89 (30)	.78 (6)	.92 (24)

*Data obtained from the ISDH Sentinel Influenza Surveillance System. This data is subject to change as sentinel sites can back-date their weekly reports. The previous 2 weeks from the reporting week are update in each weekly report to reflect updated data.
